

4° Congresso Nazionale ROI

Le prove di efficacia: il patto terapeutico tra paziente ed osteopata

The osteopathic manipulative treatment in gynecological disease

Fitzgerald Kilie

Keynote

Osteopathic management of women's health issues: young adulthood to peri-menopause (18-50 years)"

This presentation will discuss common women's health issues in Europe & UK in the two following life stages – young adulthood (18-35) and peri-menopause (35-50). The discussion will focus on the role of the osteopath in identifying female specific health issues and how the osteopath can assist with medical referral and diagnosis of these conditions. The osteopaths role in assisting with management of pain related conditions will also be explored.

Fitzgerald Kylie, DO

Course Leader – HBSO: Bachelor of Science (Osteopathy), Lecturer, Victoria University, Melbourne, Australia
Graduated at Victoria University in 2002, she's a full time academic member of the Osteopathic Medicine teaching team. She is passionate about osteopathic education and has a strong interest in clinical osteopathic research and providing stimulating learning environments and opportunities for osteopathic students. Kylie has a current interest in and has recently published and presented conference papers on implementing simulated learning and pain science education in osteopathic education. She's currently undertaking the Graduate Certificate of Pain Management (Faculty of Medicine) at the prestigious University of Sydney. Kylie led internationalisation in the osteopathy in Australia with the first international clinical exchange program for osteopathic students in July 2015.
